ST100 DSP-MCU
The Real Digital Building
# Block For Embedded Systems

Go beyond DSP with the STMicroelectronics ST100 DSP-MCU combination digital core, a core that meets the real needs of system designers and software engineers. Designed specifically for custom system-on-chip products in the most demanding embedded applications, it combines in a single core the advantages of 16-bit, 32-bit and 128-bit instruction words.

Discover an entirely new category in technical design that redefines the basics of high performance, low power consumption and accelerated time to market. The ST100 DSP-MCU. The very essence of technical innovation and excellence.
